

Autofulfillment™ SPrint™ System automatically labels, verifies and seals for fast and accurate order fulfillment

The Autofulfillment™ SPrint™ System is uniquely engineered to bring automation, speed and flexibility to high-volume mail order fulfillment applications. It is designed with advanced integration technology from Accutech Packaging and innovative product engineering from Automated Packaging Systems.

The Autofulfillment SPrint System is a modular and fully customizable system that integrates with existing Warehouse Management Systems to pull order paperwork and shipping labels once an LPN or SKU has been scanned.

The system is designed to easily package single or multiple items in the same bag, while accurately scanning and verifying the complete contents of each order.

The automated fulfillment process starts with the inline system delivering a pre-opened SidePouch® mailbag to the operator workstation. Next, the item is loaded into the open bag, and at the same time a shipping label is automatically printed, applied and verified.

The operator then cycles the bagger by scanning the next product to be loaded, triggering automatic sealing of the previously loaded and labeled bag. As that bag passes through the sealing area, the system closes out the order, while the next bag is presented for loading.

Genuine SidePouch mailbags are system-matched for optimum performance. They are available in widths up to 24 inches wide, making them ideal for packaging and shipping multiples or large, bulky items. The system and bags are backed by the industry's most comprehensive engineering and field service network.

Markets Served

- Single or multi-line mail order fulfillment
- Apparel
- Fashion Accessories
- Sporting Goods
- Footwear

The machine holds the bag open in a box-like position for easy loading

Band sealer and coordinated motion seal flattener combine for high quality, attractive, airtight seals

An optional, programmable collator/insertor delivers catalogs, literature or other promotional items to the operator for hand inserting into the bag

An optional inline printer produces the packing slip or invoice, and automatically inserts it into the bag

Features and Benefits

Streamlined

Automates the order fulfillment process to increase productivity and reduce costs

Configuration Options

Modular and customizable components provide for flexible configurations and expansion for growth

Compact

The ergonomic design and small footprint easily integrate into existing packing and shipping areas

Consistent

Stabilizes and reduces labor requirements for both on- and off-peak season

3-Point Scanning Verification

This process ensures order and shipping accuracy. The system scans and verifies the product SKU, invoice and shipping label for a positive match on all three points before the package is sealed and released

Intuitive Interface

The touch-screen control panel includes comprehensive reporting and monitoring functions, including productivity per hour, per shift, and per product line

System Matched Bags

Service & Support

Custom Engineering & Integration

Optional Additions

- Programmable Collator/Inserter
- Inline Printer
- Product Support Shelf

Technical Information

Bagger Only

Weight	1134 lbs.
Electrical	115 VAC; 60 Hz; 15 Amps
Air Feed	80 psi of clean, dry air
Bag Thickness	2.0 – 4.0 mil
Bag Sizes	W 2 to 24 in. x L 3 to 18.75 in.
