

STE98 Shrink tunnel saves energy and water

Designed to be used with the full range of CRYOVAC® shrink bags, the STE98 shrink tunnel has a hot water cascade that shrinks the bags around the product to achieve a 'second-skin' appearance.

As well as providing a high quality pack appearance, the STE98 is a user friendly fully automated, operator-free system designed to save energy and water. This is all achieved with product detection, sufficient water heating and built-in steam condensation.

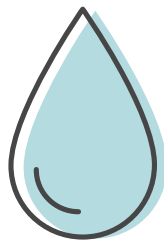

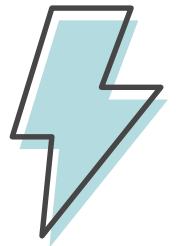

Steam version saves

55% energy

>85.280 Kwh/year

(one shift)

Electric version saves up to **47% energy**

Saves up to

**400.000 litres/
105.000 gallons**

per year

Saves

>53.300 kgCO2e GHG

per year
